About me

Very eager front-end developer with learning experience of 2 years in web development, specializing in JavaScript and modern JavaScript Frameworks. Adept at building scalable web applications and optimizing performance in agile environments. Fond of solving problems and passionate about continuous learning and staying current with new technologies to make innovation and meet evolving project requirements.

Skills

- **Technologies:** JavaScript, ReactJS, NextJS, VITE, Redux, HTML, CSS, Git, GitHub, firebase
- **Soft skills:** Adaptability, Teamwork and Collaboration, Fast learning

Personal Projects

Chat application, web-app (start-the-chat.netlify.app)

- Developed a web app inspired by the Telegram app with email authorization system.
- Added basic features: sending pictures, videos, messages and deleting them.
- Used firebase (google cloud server) in order to build real time chat between users.

Spotify clone application, web-app (spotify-changed-clone.netlify.app)

- Developed a clone of 'open.spotify.com' with a modified design.
- Redux was used widely in order to provide better state management.
- Application was created with ReactJS Framework.

E-commers application, web-app (uzum-market-clone-cyan.vercel.app)

- Developed a clone of 'uzum.uz'.
- Application was created with NextJS Framework.
- Application was built using server components, which help the initial load.

Online food ordering application, web-app (food-de-la-plaza.netlify.app)

- Developed a web app for online food ordering.
- Creative and user friendly design.

Education

Senior student of Samarkand State Institute of Economics and Service.

Human Resource Management
